

1 EXECUTIVE SUMMARY

A. INTRODUCTION

The City of Cumberland has historically been a regional hub for economic and commercial activity within Allegany County and the larger Western Maryland region. The City's economy was largely built upon a manufacturing base that established the City of Cumberland as the second largest city in Maryland. Starting in the second half of the 20th century the city's economy experienced a fundamental transformation as global economic patterns shifted and caused traditional manufacturing based economies throughout the United States to see their foundations altered.

The City has made great strides to stabilize from the economic decline that marked the past 50 years, but much work is needed in order to establish an economic base that will fill the void created through the loss of major manufacturing employers. The City of Cumberland has made progress and seen success in many areas including, but not limited to, growth as a regional medical services hub, a steady arts and entertainment district, a strong collection of stable tourist attractions, a steadily growing outdoor recreation economy, and a viable location for information technology development and a variety of mid-high level skilled office operations.

The City recognizes that it is critical to update and synthesize its economic development vision from the 2004 and 2012 strategies, and create a more defined implementation strategy to guide future endeavors. This new city-wide Economic Development Strategic Plan (EDSP) provides a framework to enable the City to pursue a proactive, comprehensive economic development effort aimed at increasing the local tax base, attracting new employers, enabling existing employers to grow, and supporting the continued development of the arts and tourism industries. The ultimate goal is to sustain and expand the economic base in order to provide for a high quality of life for all residents.

The City of Cumberland retained the services of RKG Associates, Inc. of Alexandria, Virginia to provide the technical analysis and consensus building within the City administration, the Cumberland Economic Development Commission, the EDSP Steering Committee, and the community as a whole. While RKG provided the technical analysis and guided discussions around defining and prioritizing implementation actions, it was the community as a whole that came together to define success. The four main questions this EDSP addressed are:

- What is the current economic base of the City of Cumberland and the surrounding region?
- What are the opportunities for economic base expansion in the region that Cumberland can look to capitalize on?
- What must we do in a coordinated effort to take advantage of all opportunities?
- How can we most effectively deploy our financial and other resources to achieve our goals?

B. SOCIOECONOMIC ANALYSIS

Cumberland, Maryland has historically been the center for manufacturing and industry within Western Maryland with multimodal (rail, auto, and recreation) transportation access to the Pittsburgh, PA, Washington, DC and Baltimore, MD metropolitan areas. Over the last several decades, the influence and prominence of Cumberland as an industrial and manufacturing hub in the region has diminished as businesses gravitated to lower cost environments in the southern U.S. and international facilities. This economic shift, seen in numerous northeastern and Midwestern manufacturing/industry-based economies, has had a direct impact on the current economy of Cumberland and declining and changing population and household trends over the last decade and a half. By analyzing the demographic characteristics and economic base of Cumberland, the foundation can be developed for economic development strategies that acknowledge and incorporate these realities. The following are the most substantial findings from this analysis:

Cumberland has experienced a decline in population and households and is projected to continue to do so, unlike the Western Maryland Region which continues to grow. The decline in population that Cumberland has experience over the last decade and a half reflect not only a population shift, but also an economic shift as labor-intensive industries that previously dominated the local economy have departed. Conversely, Regional growth is largely due to the increase in population and households in Washington County which is benefitting from continued economic expansion from the Baltimore and Washington DC markets.

The number of young families and retirees has decrease in Cumberland impacting the economic capacity of the City. The loss of population within the 35 to 44 years of age cohort substantially reduces the experienced labor force within the City, which would otherwise provide a solid foundation for the economy. Additionally, there has been a decline in the retiree population, aged 65 years or greater, possibly due to a lack of housing, infrastructure and services that can accommodate aging in place. While not often a substantial part of the workforce, this population represents substantial spending power within the economy.

The median household income of Cumberland is lower than both Allegany County and the Region as a whole. The Cumberland population has an overall lower wage/income levels than the rest of the Region, and substantially lower incomes than the surrounding metropolitan areas. However, the cost of living within Cumberland is consistent with the wage levels (as compared to the metropolitan areas). To these points, local businesses have noted they benefit from the local cost efficiencies, being able to pay a comparatively lower wage rate than metropolitan locations while providing a greater real income levels.

Growth in the healthcare/social service sector has offset declines in manufacturing, both in Cumberland and in the Region. Resident employment and local/regional job trends reflect consistent expansion of jobs and residents employed in health care throughout the Region. When combined with continued declines in manufacturing in Western Maryland, this ultimately indicates a shift in the foundation of the economy from a production-based market to a service-based market throughout the Region.

Cumberland remains a center for employment within Allegany County. Despite the decline of economic scale within the City and the region compared to the surrounding metropolitan markets, The City remains an employment center, with more workers commuting to Cumberland than residents commuting out of the City for work. The majority of in-commuters come from other parts of Allegany County. This corroborates anecdotal findings that the countywide economy is

inextricably linked, and the regional labor force recognizes the value of being within proximity of personal and professional services available in Cumberland.

The Cumberland labor force is competitively educated and employed in primarily white-collar occupations. The overall level of education attainment is higher in Cumberland than the Region as a whole. The majority of City residents are employed in white-collar jobs. While perceptions of Cumberland and the Region may not be consistent with these findings, they highlight the existing labor force potential to further expand professional service sectors such as Health Care/Social Assistance.

Telecommuting is a small, but growing reality for Cumberland's employment base. More than 2% of City residents "commute" to each of the following destinations: Ann Arundel County, Montgomery County, Baltimore City and Baltimore County. This indicates that while the majority of residents stay within Western Maryland to work, a small portion are choosing to live in Cumberland despite their jobs being located in the major metropolitan areas on the eastern side of the state. The growth of telecommuting most likely explains this finding, as the jobs are technically located in these metropolitan areas but the workers reside in the City. This finding supports the potential growth of back office, or "rural sourcing," as a viable economic development strategy for the City.

C. REAL ESTATE ANALYSIS

Non-residential real estate is one of many pieces within a comprehensive economic development strategy that can influence the implementation strategy. Existing companies need room to grow. New companies need space to conduct business and store products. In addition, understanding what type of real estate has been developed or sold and the current demand for property can illuminate opportunities to fill existing gaps in supply or identify market conditions that need to be addressed. This chapter focuses on better understanding the commercial (office and retail/service) and industrial real estate markets and their respective influence on economic development efforts for the City of Cumberland. The most substantial findings from this section include:

There is limited undeveloped land available in Cumberland. Cumberland is a mature community which is largely developed. Therefore, undeveloped land is in limited supply. The undeveloped supply of land is further reduced by environmental constraints, such as topography and wetlands, which can make development costly and impractical. Recent green-field development has largely taken place outside of Downtown Cumberland, where larger pieces of undeveloped land are still available. This indicates that most future development, particularly efforts to revitalize areas in and around Downtown, will focus on in-fill or redevelopment of small sites. Issues such as property assemblage need to be taken into account.

The non-residential market has not yet recovered from the impact of the 2008 Recession and economic downturn. Development trends within the City indicate there has been very little construction. Broker feedback corroborates this finding, and further indicates that investment in non-residential property has not returned to pre-Recession levels. The economic downturn not only reduced investment activity, but also consumer demand. The continued loss of population—and the corresponding consumption levels—in the City is exacerbating this challenge. For the City's efforts to encourage real estate market growth, the economic development effort needs to both improve the market climate for business and attract new residents to the City.

Cumberland has an oversupply of existing retail space, particularly in Downtown. Retail/service properties account for the largest single type of non-residential real estate in Cumberland. Due to the

recent economic shift noted above, a large inventory of these properties are either for sale or for lease. This inventory of available properties, greater than the number sold in recent years, indicates that supply of retail/service properties exceeds the existing demand. Therefore, a better understanding of the current retail/service market is needed in order to identify the best approach for reducing the surplus of property. This will include finding alternate uses for available space, identifying redevelopment opportunities, and conducting additional research to better understand what type of retail is best suited for the consumer market in Cumberland.

Institutional and corporate investment is the main source of new development in Cumberland. Given the limited available land for development and current market constraints related to consumer demand and spending patterns, many of the recent and upcoming development activity in Cumberland involves large institutions or national/regional corporate entities focused on investments near Interstate 68. At a base level, the investment locations indicate businesses are seeking to augment the local consumer base with the thru-traffic along the Interstate. Furthermore, these entities have the capital absorb the risks associated with development in the current market. These findings indicate that development potential is limited to specific locations and types of development in the near-term development projects without some form of public private partnership.

Opportunity for planned, non-residential development that is tied to an area vision has the potential to positively impact the economy. The real estate market analysis reveals that a more directed, vision-based approach is needed to encourage a revival of the non-residential real estate market in Cumberland. Opportunity sites have been identified through combining the vision of the community and the results of the market analysis. Existing market and socioeconomic conditions have been used to inform the potential focus for future strategic investment efforts. However, for redevelopment and the resulting economic growth potential to be realized, additional research and planning efforts are needed to identify how to approach each area in order to ensure that the City can maximize the impact of its economic development investments.

D. TARGET INDUSTRY ANALYSIS

The identification of existing and potential industry clusters is a critical element of a strategic plan for economic development. Industry "clusters" are strategic groupings of businesses and industries that locate within close proximity of each other, or near a strategic resource, to gain economic benefits.

In order to identify the industry clusters for the City of Cumberland, the consultant first identified the strengths and weaknesses of the City, the business climate, and quality of life factors. Using a screening process (described in detail later in this chapter), the consultant then identified particular industry groups that either already exist or would benefit from the competitive advantages of Cumberland as an economic hub within Western Maryland.

The result of these efforts is a list containing specific industry segments that are compatible with the resource offerings and industry activity of Cumberland. This list is intended to be used to focus a comprehensive recruitment effort by the City's economic development entity, as well as other local or partnership-based organizations charged with this responsibility. This target industry list is not intended to preclude any non-listed industries from being recruited or otherwise encouraged to locate within the City. Rather, this list exemplifies those industries that may have the greatest interest in the City of Cumberland based on local and regional competitive advantages. The target industries are:

Target Industry Cluster #1 – Back Office and Remote Business Services

Cumberland offers a unique market opportunity for businesses that serve clients in metropolitan areas but do not have to be located in those areas. The City's proximity to Pittsburgh, Baltimore and Washington, DC market allows these remote companies to have access to three substantial customer bases within a two-hour drive. Cumberland is well served with fiber optic telecommunications infrastructure, making data processing and movement convenient and accessible.

Cumberland's high quality of life, year-round outdoor recreation amenities, low cost of living, and well regarded schools make the City an ideal location for persons/families that value a more rustic lifestyle. Downtown Cumberland is a strategic asset, as it offers and urban scale and charm not commonly found in less developed areas. Communities such as Morgantown, West Virginia, Asheville, North Carolina and Covington, Georgia have developed niche business services industries being located on the periphery of larger markets.

While overall employment numbers for service-based industry sectors have been relative stable in the region over the past decade, the greater regional market has experienced growth in a number business and professional service industries. For example, internet-based companies have grown substantially in Allegany County and the greater region (1,484 jobs) between 2003 and 2012. Locally, Cumberland has had success in attracting and sustaining financial services companies and information technology companies. Other sectors have been successful regionally, but not locally. These include professional, technical and scientific services and administrative and support services. Specific industries within these sectors should be considered as part of a larger recruitment effort, but monitored closely during the City's implementation effort to determine the long-term potential. Industry sectors, and specific industries to pursue as part of this effort include:

Administrative and Support Services

- Data Processing, Hosting and Related Services
- Inbound and Outbound Telemarketing
- Direct Mail Advertising
- Translation and Transcription Services
- Process, Physical Distribution and Logistics Consulting Services
- Financial Transaction Hosting and Processing

Internet and Virtual Services

- Software Publishing
- Motion Picture and Video Processing
- Telecommunication Support Services
- Internet Publishing
- Cyber Security Services

Professional Services

- Management, Scientific, and Technical Consulting Services
- Architectural, Engineering, and Related Services
- Advertising and Related Services
- Legal Support and Research Services
- Accounting, Tax Preparation, Bookkeeping and Payroll Services

Technical Research and Modeling

- Computer Systems Design and Related Services
- Scientific Research and Development Services
- Agriculture and Biological Research/Consulting Services
- Other Professional, Scientific, and Technical Services

Given the City's labor market fundamentals, this business recruitment effort will have the best chance of success targeting small firms and specific departments of larger firms. Realistically, the City should focus on companies with fewer than 25 employees. Taking this approach increases the value of Cumberland's quality of life, since the business owner/manager will have a greater say in location preferences. In addition, it mitigates potential concerns about staffing if some of the company's existing employees are not willing to relocate to Cumberland. That said, these criteria does not limit the potential business prospect market. RKG Associates collected establishment counts for business with fewer than 20 employees within the four regional metropolitan areas in each of the identified industries (Table 5-5). There are almost 63,000 businesses that met the criteria in these markets alone. Given Cumberland can market to companies outside of these areas as well, the recruitment focus should not be a limiting factor in potential success.

It is important to note that this recruitment effort cannot be implemented in a vacuum. There are a number of other initiatives that need to occur concurrently to position the City for success. Most notably, the continued reinvestment in Downtown Cumberland's building stock is important. These businesses most likely will have some interest in a Downtown location, and having appropriate space available for immediate lease will be an asset. To this point, the City may need to take a more proactive, partnership role in ensuring there is sufficient supply available. 19 Frederick Street may be a good pilot location for this program.

The pursuit of this target industry cluster should not be limited to established businesses. The target industry analysis revealed there are market niches within these industries for Cumberland to develop entrepreneurial and home-based businesses. Implementation recommendations such as the business incubator concept, the minority/woman-owned business entrepreneurial program, and home-based loan pool initiative expands the focus to individuals with promising ideas, therefore increasing the City's chances for success.

Target Industry Cluster #2 – Healthcare and Social Services

The economic and target industry analyses have shown that healthcare/social assistance industry sector is Cumberland's and the Western Maryland region's strongest growth industry. Despite the net loss of more than 5,000 jobs in the six-county study area between 2003 and 2012, the healthcare and social assistance industry sector experienced a net gain of more than 2,700 jobs. Information services was the only other industry sector (almost exclusively in Allegany County) to experience a net employment growth over 1,000 jobs over the entire study area. While healthcare and social assistance has been the largest employment sector in Allegany County, it has surpassed retail services and manufacturing to become the largest employment sector in the region as well.

At a base level, there is the potential to attract medical specialties currently not represented—or underrepresented—in Cumberland to the market. This effort would need to be done in coordination with Western Maryland Health System to augment their offerings at the hospital and coordinated urgent clinics. Additionally, conversations with healthcare professionals indicated a challenge to recruit and maintain primary and emergency care professionals. Part of the marketing and recruitment effort should be to develop a public/private partnership with Western Maryland Health System to attract physicians, nurses, and research professionals.

In October of 2013, Frederick Regional Health System in Frederick, Meritus Health in Hagerstown and Western Maryland Health System in Cumberland signed a joint regional alliance agreement. This agreement is intended to improve healthcare for persons living in western Maryland through shared services and management, combined quality initiatives, and clinical integration. This effective consolidation of hospital services offers a unique opportunity for the City, from an economic development perspective. In addition to the streamlined approach to providing care, there likely will be a consolidation of services that are not needed in three locations. To this point, the City of Cumberland should be working with Western Maryland Health Systems to establish incentive programs and/or public-private partnerships aimed at directing the most coveted specialties/programs to Cumberland.

Target Industry #3 – Arts, Culture, Tourism, and Recreation

As noted throughout this document, Cumberland is at the center of a four-season recreation and tourism market. In addition to the C&O Canal Trail and GAP Trail connection at Canal Place, the City hosts arts venues, holiday/community events, outdoor music concerts, and nationally recognized tourist destinations (i.e. the Western Maryland Scenic Railroad). In addition, Cumberland is within close proximity to historic (Antietam Battlefield), sporting (whitewater rafting, skiing), and entertainment (Rocky Gap Casino) venues. Cumberland's central location has led to the development and growth of a small bed & breakfast market as well as high hotel occupancy levels. To this end, the City is investigating the feasibility of a Downtown boutique hotel concept (in partnership with ACM) and the potential for additional hotels along Interstate 68 (2014 hotel study).

The economic and target industry analysis revealed that the hospitality, entertainment, and recreation market sectors have experiences modest to moderate growth locally and regionally. This is due, in part, to the development of Rocky Gap as a casino. However, Cumberland offers an authentic downtown experience within driving distance of the Baltimore and Washington DC metropolitan areas that can expand the stay of persons already enjoying the destinations in and around the City. Other areas within close proximity to these metropolitan areas have been very successful developing this tourism niche that has expanded day and overnight visitors (i.e. Reading, PA, Winchester, VA).

That stated, the City's economic development implementation entity can only be one component of the holistic arts, culture, tourism, and recreation market development. There are a number of existing entities that will have to play a leadership role in this effort including Allegany Tourism, the Allegany Arts Council and the Cumberland Downtown Development Commission.

On a positive note, there are a number of initiatives currently underway that will allow the City's economic development to partner in growing this market opportunity. For example, the Arts Council has initiated a Creative Placemaking strategic planning effort to grow arts in Allegany County. The City's economic development entity can partner in this endeavor to help identify specific projects that complement Creative Placemaking and assist in attracting private sector investment. Similarly, the growth and expansion of activity at Canal Place can be a collaboration between the City's economic development effort and the Canal Place Preservation & Development Authority.

That said, the level of internal coordination amongst the various arts, culture, tourism, and recreation venues/organizations limits the potential effectiveness that the City's economic development organization can have in this target industry. Simply put, there are too many individual stakeholders for the implementation entity to work with each individually. Furthermore, the scale of effort for many of these stakeholders will not justify the cost/benefit for Cumberland. To this end, better coordination and collaboration of the arts, culture, tourism, and recreation entities will be necessary to realize the true potential of an economic development partnership. While creating a strategic plan to formalize the relationships necessary to create a partnering entity is beyond the scope of the City's economic development strategic plan, RKG Associates recommends that a parallel effort be initiated to develop a tourism development strategic plan that can be dovetailed into the City's (and the County's) economic development efforts.

E. IMPLEMENTATION

This implementation strategy provides a framework to enable the City to pursue a proactive, comprehensive economic development effort aimed at increasing the local tax base, attracting new employers, enabling existing employers to grow, and supporting the continued development of the arts and tourism industries. This implementation plan is intended to guide the City's economic development efforts over the next five to ten years. The strategies developed for Cumberland focus on the City's defined goals, and address both the needs and impediments for existing business while defining methods for attracting and growing new business areas of opportunity.

Throughout the planning process, RKG Associates has engaged with numerous public, non-profit and private entities, civic and institutional organizations, elected leaders, partner organizations, and the Cumberland community. These interactions provided a number of benefits for the strategic planning process. However, the most important benefit is it enabled RKG to synthesize the desires, frustrations, and preferences into the empirical data collected and analyzed into those overarching issues that must be addressed in order for the community to be able to move forward. It is through these principles that RKG Associates, the City's economic development staff, and the Steering Committee defined the City's economic development goals, framed the implementation strategy, and prioritized actions. For the City of Cumberland, the strategies overarching principles are:

- Promote a "unity of vision" for Cumberland's economic development efforts
- Take advantage of local, regional, and state-wide initiatives
- Look beyond the "traditional" economic development efforts

The City assembled a Steering Committee to represent City interests in the development of this plan. As part of that effort, a comprehensive outreach strategy was held to identify, refine and select the City's economic development goals. These goals were presented and reviewed at each milestone interaction with the Steering Committee and the public. The following list of goals represents the culmination of this input and selection process. It is important to note that the order of goals is not reflective of priority.

- To create jobs that pay above median income for Allegany County
- To add wealth through "primary" job attraction
- To create a new image for Cumberland that can be marketed
- To encourage entrepreneurship and small business development
- To define a tangible, multi-year plan that can garner support
- To identify a strategic approach to addressing blight and redevelopment
- To reverse negative attitude in community
- To educate decision makers and community stakeholders on the purpose and value of economic development
- To create a business case for moving past the "the way it was" mentality
- To continue development and growth of the robust arts and tourism markets in Cumberland

The implementation strategy organizes the action steps into three topic areas most relevant to the goals and priorities established by the Steering Committee. These categories include: [1] Market and Asset Development, [2] Marketing and Outreach, and [3] Organization and Regulatory. The prioritization of action steps was shaped through combining the vision of the Steering Committee, the expectations of civic and government leaders, current market conditions, identified opportunities, and projected future market influences.

The following implementation matrix presents the full range of objectives and corresponding action items for consideration when creating the implementation entity's first year business plan. The time lines, estimated costing, and implementation partners for each action item identified in the matrix reflect of the level of effort desired by the Steering Committee and assessment by the Consultant. The final business plan established by the implementation entity should be heavily influenced by the Steering Committee's established strategy, but refined based on the available strategic and capital resources available to this effort. The final timing, focus, and potential costs will be better determined by the formal implementation entity representatives and the dedicated participation from various public and private sources. A more detailed narrative of the most substantial efforts the City of Cumberland and its implementation partners should undertake is provided in the Implementation Strategy chapter.
